SAMUEL OLAWALE ATILOLA

SENIOR SOFTWARE ENGINEER

Lagos, Nigeria • 08035208600 • atilola33@yahoo.com
Portfolio • GitHub • LinkedIn

PROFESSIONAL PROFILE

Senior Software Engineer and Full Stack Software Engineer with hands-on experience building and scaling customer-facing features using React, TypeScript, Node.js, and PostgreSQL. Proven track record of architecting and deploying scalable full-stack applications, multi-tenant SaaS platforms, and cross-platform mobile apps—delivering architectural performance optimizations that reduce API latency by up to 40% and delivering end-to-end full-stack transaction platforms within tight product release cycles. Passionate about leveraging AI tools, solid CS fundamentals, and modern infrastructure workflows to build reliable, user-focused products from system design through operational ownership.

TECHNICAL SKILLS

Front-end: React, Next.js, React Native (Expo), JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS, Vite

Back-end & Databases: Node.js, Express.js, REST API Architecture, PostgreSQL, Neon PostgreSQL, Prisma, SQLite, Java, Python

Testing & Quality Assurance: Jest, Vitest, React Testing Library, Unit Testing, Integration Testing

Mobile & Web: Cross-platform App Development, Capacitor, Progressive Web Apps (PWA), Responsive UI Development, Web Application Development, Mobile Application Development

DevOps & Infrastructure: Git, GitHub, GitHub Actions, Vercel, Render, VS Code, Docker, Kubernetes, Infrastructure Management, Google Cloud Platform

Automation & AI: AI Coding Assistants (Cursor, GitHub Copilot, Gemini, Claude),
Prompt Engineering, Workflow Automation

Software Engineering Fundamentals: Algorithms, Data Structures, Object-oriented Design

PROFESSIONAL EXPERIENCE

Farmitly Technologies — Software Engineer **Feb 2026 – Present**

- Spearheaded the integration of backend APIs into the Farmitly Management Dashboard, migrating codebase from mock structures to live streaming data endpoints while reducing data-loading latency by 40%.
- Resolved complex structural asynchronous race conditions and synchronization state conflicts between frontend and backend architectures, leveraging advanced algorithms and data structures to ensure 100% data integrity with zero regressions.
- Developed and maintained cross-platform mobile applications using React Native (Expo) and TypeScript, implementing automated unit tests using Jest to maintain over 85% test coverage.
- Built modular, scalable UI design components using object-oriented design principles and automated asset delivery pipelines, accelerating production feature implementation timelines by 20%.

Olabits Tech Solutions — Lead Full-Stack & Mobile Software Engineer (Contract / Freelance) **2022 – Feb 2026**

- Architected, engineered, and successfully deployed highly reactive full-stack solutions, cross-platform mobile utilities, and multi-tenant SaaS architectures from the ground up, maintaining strict product release windows.
- **Olabits Estate Bot:** Developed a multi-tenant real estate AI chatbot SaaS platform using Next.js, Prisma, and customized AI prompt engineering; designed scalable schemas and integrated secure Paystack APIs for automated subscription lifecycles.
- **Olabits Stores:** Built a production-ready full-stack e-commerce engine leveraging Next.js server components and Neon PostgreSQL to achieve sub-100ms server rendering, executing unit/integration testing workflows with Vitest.
- **Expense Tracker Mobile App:** Engineered an offline-first personal finance Android application using React and Capacitor; successfully integrated native @capacitor/preferences storage layers to guarantee strict native data persistence and privacy under low-memory states.

- **MT5 Multi-Client Trading Bot:** Built an automated trading execution pipeline using cloud-agnostic multi-client deployment profiles and robust custom encryption layers to secure enterprise account parameter keys.

SeaBite Express — Software Engineer (Freelance / Contract) **Jan 2026 – Feb 2026**

- Architected, built, and successfully deployed an end-to-end full-stack business transaction platform from scratch within an aggressive 4-week release window, leveraging REST API architecture and responsive UI to support immediate field operations.
- Engineered high-throughput relational databases and secure endpoints using Node.js, Express.js, and PostgreSQL to capture operational sales flows, saving administrative staff 10+ manual reporting hours weekly.

ADDITIONAL ENGINEERING PROJECTS

GMT Homes Real Estate Platform

- Built a polished Next.js real estate application complete with interactive property rendering, integrated user authentication dashboards, modular listing pipelines, and secure PostgreSQL persistence.

AI Job Hunter Bot

- Developed a background operational pipeline tool utilizing GitHub Actions and Resend to monitor job directories, run parsing rankings, and deliver analytics digests directly to inbox infrastructure.

EDUCATION & LANGUAGES

Software Engineering — GMT Softwares Academy **Completed**

B.Sc. Physics (Hons) — Federal University Lokoja **2016 – 2021**

- Graduated with a 3.25 CGPA (Second Class Lower)

Languages: English (High Proficiency)
